Subject: Follow up to Michigan Lake Foam issue

Please consider this email as an official request from the Michigan Department of Environmental Quality (DEQ) for assistance in developing sampling methods and procedures for analyzing foams that are generated in surface waters from PFAS contamination. The DEQ is currently dealing with lake foam issues at two sites where groundwater contaminated with PFAS from AFFF use is moving into surface water bodies. In addition, the DEQ would appreciate your assistance in understanding the potential human health implications of PFAS in surface water and foam by dermal absorption, ingestion, and other modes of exposure. This email is in follow up to the email from Andrew Gillespie on March 2, 2018, outlining how DEQ could request assistance from EPA in this matter. Please contact me if you need further information to move this request forward, thank you.
